## PROFESSIONAL SUMMARY

---

Information Systems student at Ghana Communication Technology University (GCTU) with a 3.81 GPA. Proficient in object-oriented programming (OOP) using C++ and JavaScript, with hands-on experience applying data structures, debugging techniques, and the software development lifecycle (SDLC) through independently deployed projects. Seeking a software engineering internship to contribute to real-world systems and deepen skills in agile development environments.

## EDUCATION

---

### Ghana Communication Technology University (GCTU) — Accra, Ghana

B.Sc. Information Systems | GPA: 3.81 / 4.00 | Expected: June 2029

## PROJECTS

---

### Car E-Commerce and Dealership Website

2024 | Collaborative Developer (3-person team) | HTML, CSS, JavaScript

itzyeboiabraham.github.io/Car-Website

- Collaborated with a 2-person team to implement and deploy a fully responsive multi-page car dealership e-commerce site, measured by a publicly accessible live deployment, by adapting an existing design reference and applying HTML, CSS, and JavaScript to build modular, functional components across desktop and mobile viewports.
- Delivered 3 functional modules including a review system, contact form, and inventory display, measured by successful end-to-end testing across all features, by coordinating task assignments across the team, debugging event-listener logic, and applying problem-solving techniques throughout the software development lifecycle (SDLC).
- Managed collaborative code delivery for a 3-person team, measured by a clean and conflict-free final codebase, by establishing a shared Git version control workflow and maintaining a structured commit history to enable parallel contributions and iterative releases.

### Student Information Portal

2024 | Software Developer | C++, Object-Oriented Programming (OOP)

github.com/ItzyeboiAbraham/C-plus-plus-SIP

- Accomplished a secure multi-user authentication system, measured by successful sign-up, login, and grade-retrieval flows for multiple test users, by applying core data structures including arrays and structs alongside object-oriented programming (OOP) principles such as encapsulation and modular function design in C++.
- Reduced logic errors by iteratively debugging the authentication and data-retrieval pipeline, measured by zero runtime crashes across all tested user scenarios, by applying systematic troubleshooting techniques and structured code reviews against expected program outputs.
- Delivered a complete working program following a full software development lifecycle (SDLC) from requirements definition to final deployment on GitHub, by managing source code with Git version control to enable rollback and iterative improvement.

### Personal Developer Portfolio

2024 | Front-End Developer | HTML, CSS, JavaScript, GitHub Pages

itzyeboiabraham.github.io/Portfolio

- Accomplished a live professional online presence with a fully indexed and publicly accessible portfolio deployed on GitHub Pages, by applying responsive web design techniques and problem-solving skills to optimise layout performance across screen sizes.
- Demonstrated end-to-end project ownership across the software development lifecycle from initial wireframe to production deployment, by using Git for version control and tracking changes across multiple iterations to maintain a professional and auditable commit history.

## TECHNICAL SKILLS

---

**Programming Languages:** C++, JavaScript, HTML, CSS

**Concepts and Methodologies:** Object-Oriented Programming (OOP), Data Structures and Algorithms, Software Development Lifecycle (SDLC), Debugging and Troubleshooting, Version Control (Git)

**Frameworks and Libraries:** React (foundational)

**Tools and Platforms:** Git, GitHub, VS Code, Code::Blocks, Kali Linux (learning), Windows
